

ENSURE360 LOCATOR

The Ensure360SM Locator is the backbone of the location feature. With an appropriate number of Locators in each area, the Ensure360 platform can use them to receive location data sent out by the Pendant. The Locator then passes data back to the Headend, where it will determine the Pendant's location. After installation, the Locator does not require any user interaction to work; it just needs to be plugged in.

For living areas such as resident apartments, one Locator should be used in each room where location is desired to be identified. For example, if it is desired to know whether a resident is in their bedroom versus their bathroom, the apartment will need two Locators, one in each room.

For larger areas such as common areas, a Locator can detect devices within a 30' radius. It is likely that more than one will be needed to cover larger areas like dining or activity rooms.

Installation Instructions

1. Remove Locator from box
2. Remove outlet cover screw
3. Plug in Locator
4. Reinstall outlet cover screw through Locator

Specifications

Dimensions: 3.086" L x 2.085" W x 1.647" H

ENSURE360 LOCATOR

Parts

- Locator

Technical Specifications

LED Patterns:

- Locator powering on - Red, green, blue flash sequence
- Locator being updated - Green and yellow flash

Supervision interval - 15 minutes

THE ENSURE360 SOLUTION

Ensure360 is the perfect combination of Real-Time Location System (RTLS), environmental sensors, wearables, motion detectors, and traditional emergency call equipment designed to create a bubble of protection for your residents. The system, comprised of: a Headend server, a Desk console, a wireless mesh network made up of Extender access points, the Director network coordinator, and an array of Locator location beacons, will communicate with various end devices around the community to create a modular system to fit your needs! The end devices for Ensure360 include: the Pendant for tracking resident and staff location and providing a way to call for help from anywhere, the corded Pull Station, the touch pad Push Station, the Universal Transmitter with 2 dry contacts, and the Motion Sensor. Ensure360 will provide you with the most powerful emergency call system you've ever used.
